

Neural Network: Multi-layer Perceptron

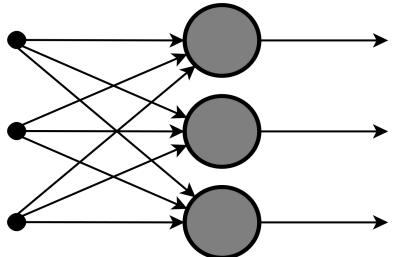

Introduction

- Robust approach to predict real, discrete or vector value
- Inspired from Biological learning system
- Solve both biological and non-biological problems
- Representation Element
 - Nodes
 - Edges
 - Edge Weights
 - Bias
- Instances are represented by many attribute-value pairs
- The training examples may contain errors
- Long training times are acceptable
- Fast evaluation of the learned target function may be required
- The ability of humans to understand the learned target function is not important

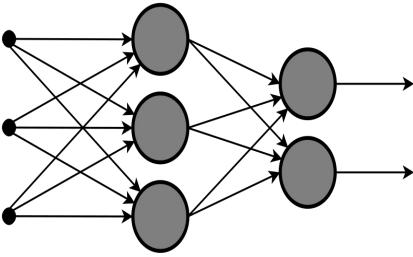

Introduction

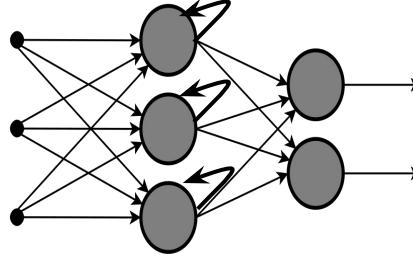

Types of Neural Networks

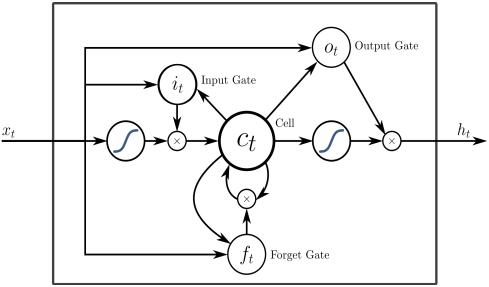

Perceptron or Single Layer NN

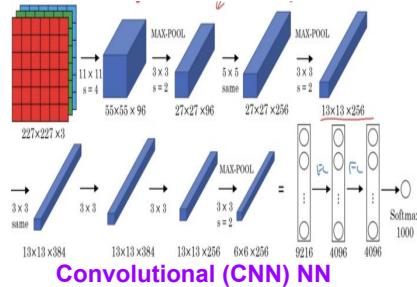

Feed Forward (MLP) NN

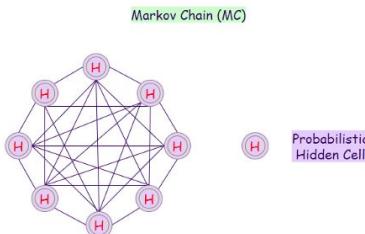

Recurrent (RNN) NN

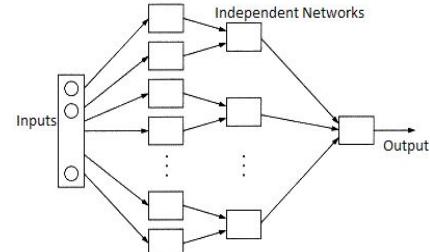

Long Short Term Memory (LSTM) NN

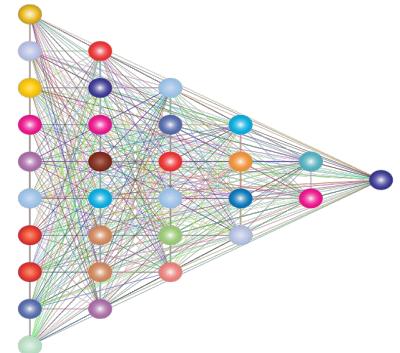

Convolutional (CNN) NN

Markov Chain (MCNN) NN

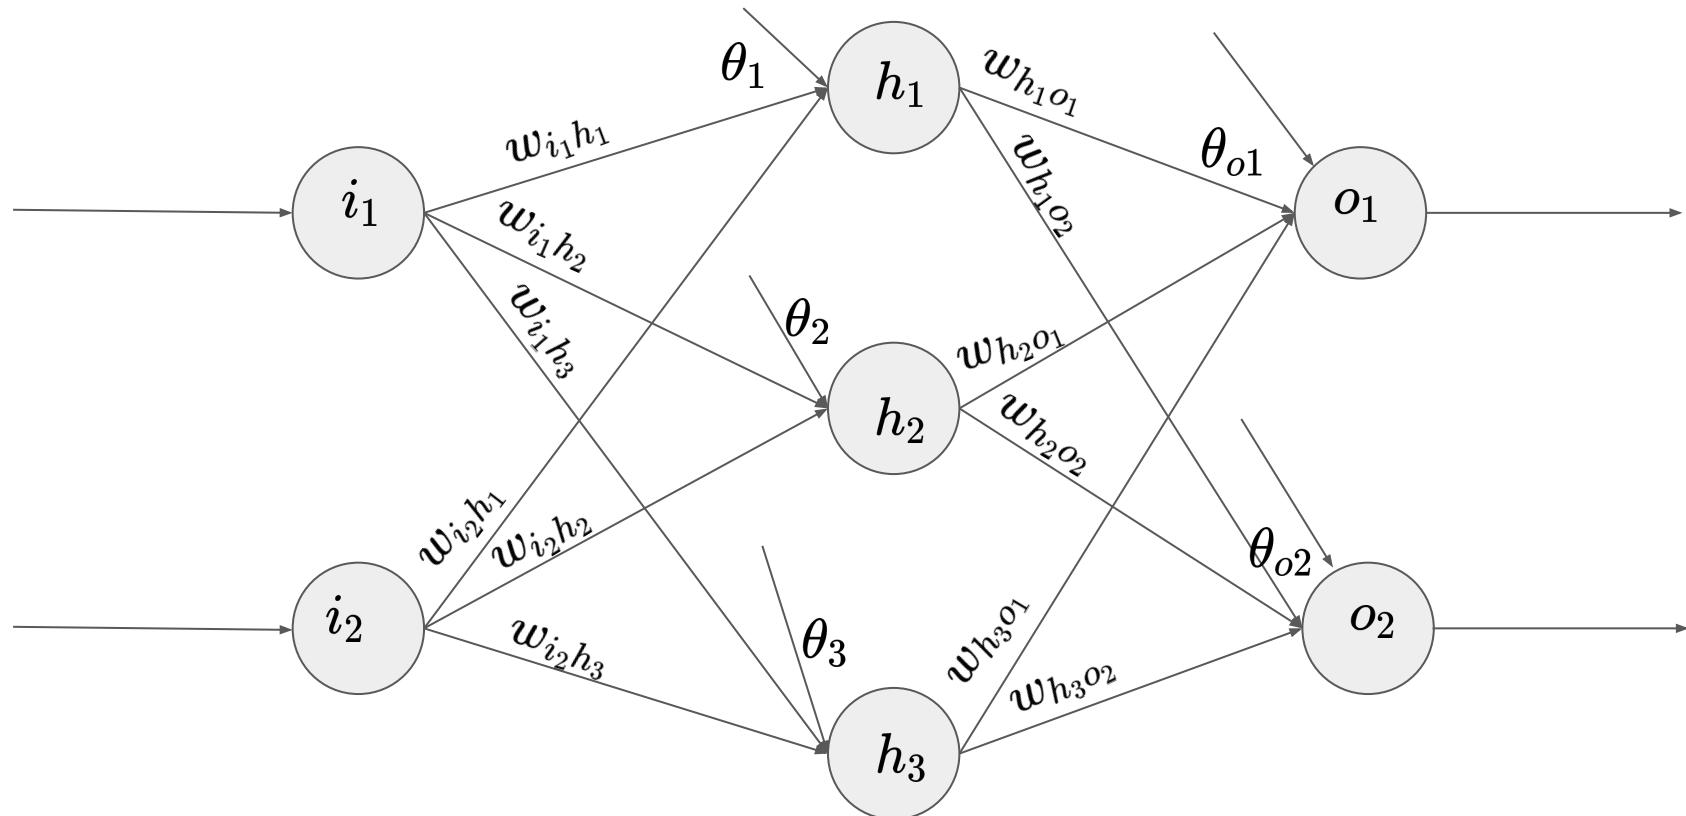

Modular (MNN) NN

Deep Neural Network

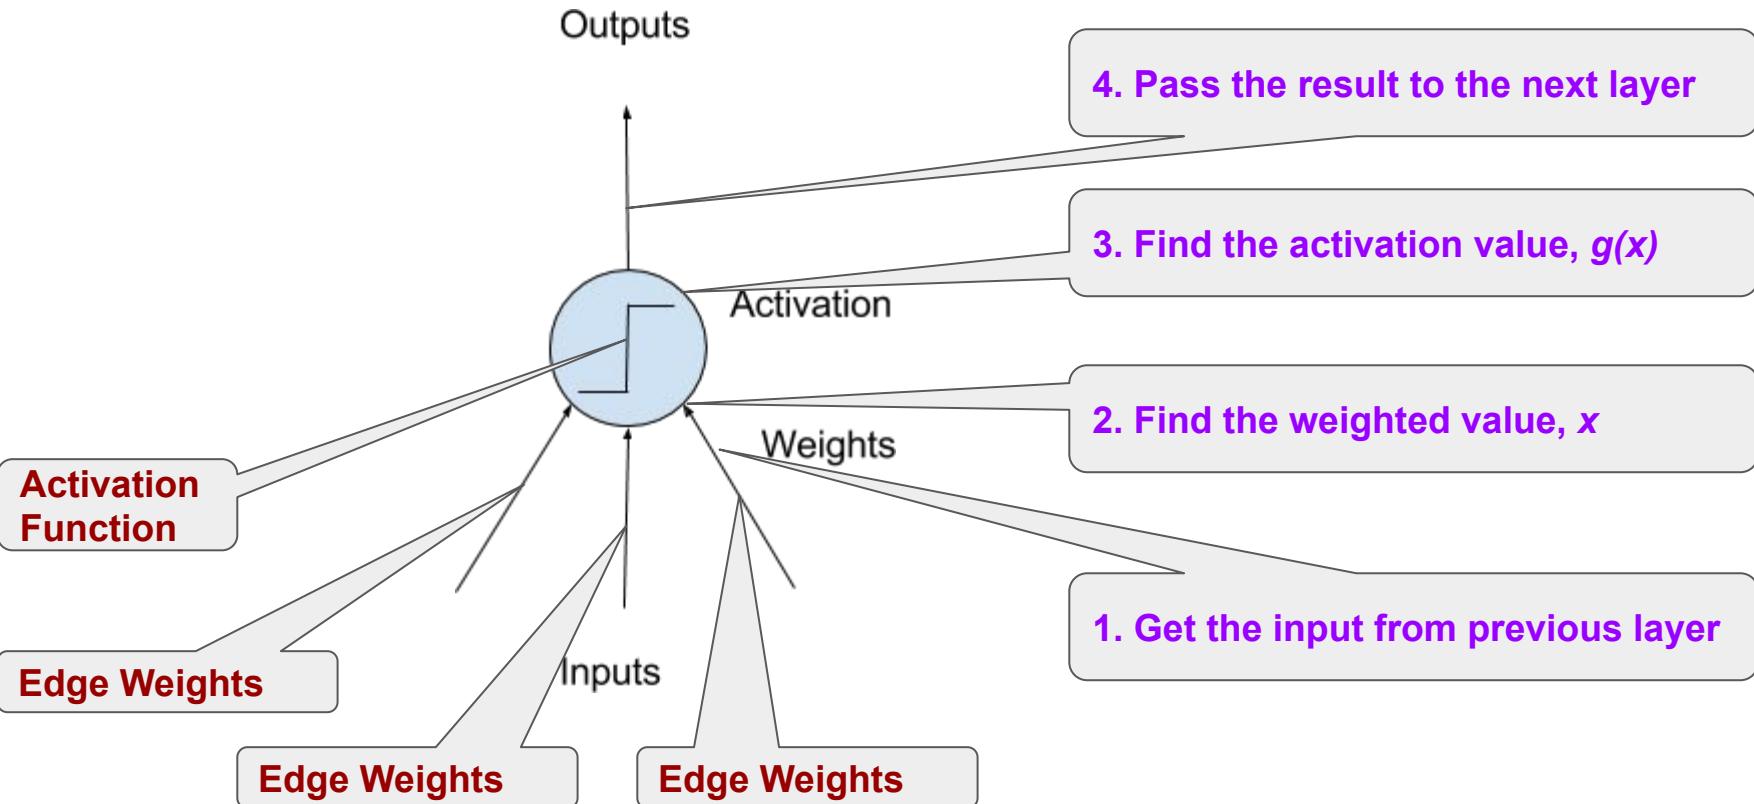

Multi-layer Perceptron

Multi-layer Perceptron NN

- The most useful type of neural network
- A perceptron is a single neuron model
- Investigates how simply biological brains can be modeled to solve difficult computational tasks
- Develop robust algorithms and data structures
- Power of the ability to learn the representation in training data
- Neurons are the building block
- Neurons are arranged into network of neurons
- Two layer learning and predicting methodologies:
 - Feed Forward
 - Backpropagation
- Activation Function needed on neuron
